

Bulletin No. 2026-03

Expansion of Teraview eNotifications

Date: August 25, 2026

Effective August 29, 2026, enhancements to the Teraview eNotifications service will provide users with greater flexibility in managing and receiving system notifications.

On January 12, 2026, the Return for Correction eNotification preference was expanded to allow for the addition of up to four email addresses (see [Bulletin 2026-01](#)). Beginning August 29, 2026, a similar expansion will be available for additional subscription types. This enhancement allows organizations to distribute important notifications to multiple individuals and supports improved operational awareness and continuity.

The enhancement will be available for the following notification subscription types:

- Courier Tracking
- Document/Plan Request Status
- Instrument Access
- Low DAPP Balance
- User Messages

In addition, users who have not subscribed to eNotifications will receive an annual reminder encouraging enrollment in the service.

For more information, including instructions on how to add email recipients and manage notification preferences, please [click here](#).
